Release Notes | Version 1.16

Bug Fixes:

None

Enhancements:

Ability to integrate with Cirrus AI

Introducing cirrusAI Notes – a groundbreaking solution transforming clinical documentation. cirrusAI Notes seamlessly captures natural patient-provider conversations in real-time, automatically generating and integrating documentation directly into the EHR. Powered by cutting-edge Healthcare Generative AI, it alleviates documentation burdens, saving providers 20% more time per day to focus on delivering exceptional patient care. With multilingual support, cirrusAI Notes expands accessibility and inclusivity, redefining the future of healthcare efficiency and innovation.

For more information, contact support.

Patient Data Restriction request

Added functionality to allow patients to request data restrictions from the patient portal. This request will be sent to the practice for acknowledgement.

The New Request for Data Restriction message will display in the users Worklist for acknowledgement.

USCDI v3

Patient Demographics

Added the ability to capture codified Occupation and Occupation Industry.

Added the ability to capture tribal affiliation

NOTE: These additional fields can also populate with the data coming across from the WinPM integration.

Payer Info

Users now have the ability to view insurance information on a patient if received.

Clinical Note Types

Improved the workflow of utilizing the following clinical note types within the patient chart:

History & Physical

Procedure Note

Progress Note

Social Determinants of Health (SDOH)

Added the ability to designate SDOH findings within the problem list and procedures list.

Added ability to associate SDOH Goals and Health Concerns within the Histories and Objectives card.

Histories and Objectives

Created Date	Category	Display	Code	Type	Onset Date	Relationships	Notes
6/21/2015	Goal	Housing adequate (finding)	161036002	Patient Goals, preferences, and priorities for care experience

6/21/2015	Social history	Not pregnant (finding)	60001007	Health-related behavior			
6/21/2015	Mental status	Amnesia (finding)	48167000		5/1/2005		

C-CDA

Updated the generation of the Clinical Document (CCD) to align with the updated standards. All new data elements are now incorporated into the CCD when generated and transmitted.

Patient Interventions

Improvements to the demographic parameters have been made. Users are now able to include ethnicity, race and sexual orientation as parameters for the patient intervention.

Added ability to include implantable device information in the patient intervention.

Added ability to include immunization information in the patient intervention.

Added ability to include source attributes, if applicable, to the patient intervention.

Users now have the ability to interact with the intervention when a selected patient meets the parameters assigned.

Click on the illuminated icon to see the information associated.

To document an action taken click within the Action Taken column or expand the arrow to the left of the intervention.

From this window, users can select an action from the dropdown as well as provide additional feedback in the note field.

Reports

A new Patient Intervention Feedback report is now available. This report will display all responses and feedback documented on Patient Interventions.
